UML - Use Case Diagram

About :-

~ A use case diagram is used to represent the dynamic behavior
  of a system.
~ It shows relations between actor (Object Entity) & actions
  (Project Operations), it also represents behavior of actions as
   per their nature.
~ ' Extends ' keyword is used when use cases may or may not
   exists together.
~ ' Include ' keyword is used when the use cases are totally
   dependent on each other for their existence.
~ -------> is used to show these association between two use
   cases.
~ A line can be used to link actors to the use cases as per their
   behavior.
~ A block arrow can be used to show generalization.

Benefits of Use Case Diagram :-

~ It plays an important role in showing behavior of object
   entities and their corresponding use cases (actions).
~ It shows external overview of the system.
~ It conveys needs of the system to the developer.
